

Team: 2

Sprint: 2

Date: 22 September 2020

Attended:

Scrum Master: Anthony Ojaimi (s3782507)

Product Owner: Danial Isman (s3786400)

Development team:

Darren Huang (s3755729)

Chinguun Undrakh (s3774562)

Sprint Goals

The sprint goal in this sprint:

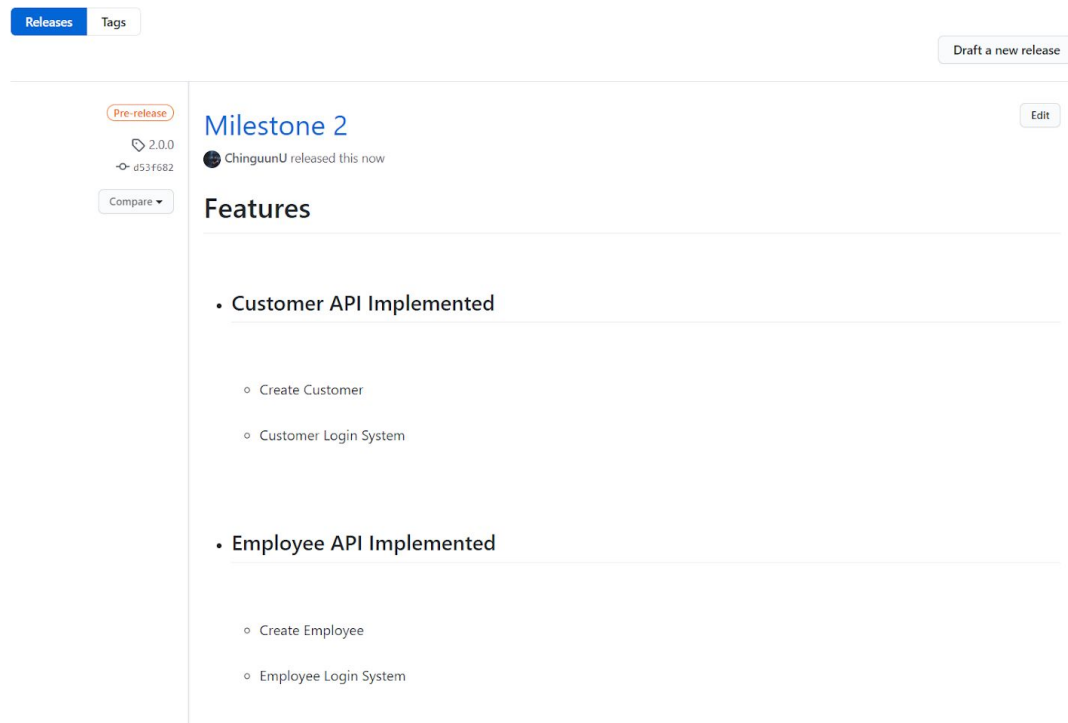

- Setup spring boot template
- Setup react template
- Complete 12-16 user stories
- Set up communication channel and tools
- Complete the Product backlog

Status Overview

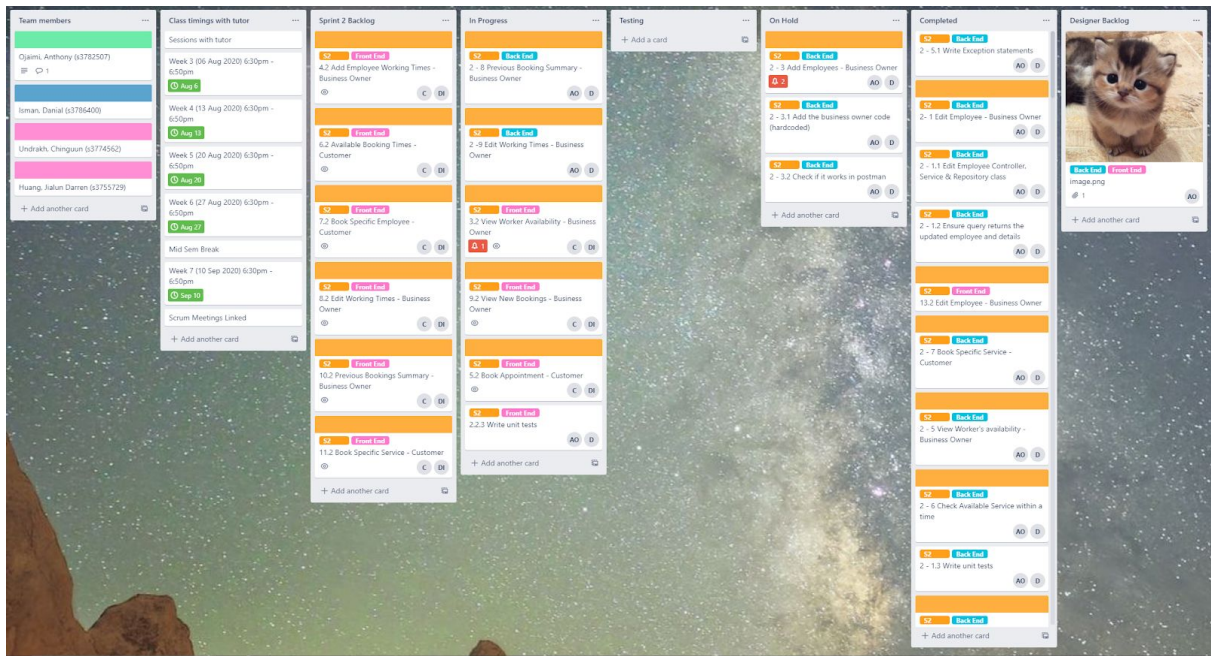

Throughout the sprint, most of the goals planned to be completed for the sprint were finished on time. The main things that were not completed include AWS deployment. During the sprint, the sprint backlog was completed with the only exceptions being implementing all the front end booking related services such as making a booking as a customer, viewing current bookings, view past bookings and view available bookings for all users. Additionally, viewing employee working/available times was not implemented in time for the sprint. However, many of the frameworks and structures for implementing these features were made and it would be extremely easy to finish them off early in the next sprint.

Screenshots

The group's github repository that has been setup and released as v2.0.0

The trello board used to effectively assign the tasks to different states such as 'planning', 'Progress', 'Testing', 'On Hold' and 'Completed'. It ensures organisation between group members.
