Team: 2

Sprint: 0
Date: 12 August 2020

Attended:
Scrum Master: Anthony Ojaimi (s3782507)
Product Owner: Danial Isman (s3786400)
Development team:
Darren Huang (s3755729)
Chinguun Undrakh (s3774562)

Sprint Goals
The sprint goal in this sprint:

- Setup spring boot template
- Setup react template
- Complete 12-16 user stories
- Set up communication channel and tools
- Complete the Product backlog

Status Overview

Throughout this sprint all goals which were planned for the sprint were finished within the sprint. The largest priority during this sprint was the implementation of the User Stories and setting up the project such as the Spring Boot and React template. During this sprint, Product and Sprint Backlog was also completed on the trello board.

Screenshots

The group's github repository that has been setup and released as v0.0.1

The group's first half of the trello board is used to store and organise the User Stories, Product Backlog and Sprint Backlog

The second half of the trello board used to effectively assign the tasks to different states such as 'planning', 'Progress', 'Testing', 'On Hold' and 'Completed'. It ensures organisation between group members.

Team Meet

General started

▾ Collapse all

Danial Isman Yesterday 7:36 PM
- Write as many user stories as possible, at an absolute minimum, at least for the first two sprints
- Prepare your product backlog, including performing task estimation, and prioritise your backlog based on meetings with the client/product owner
- Write test cases and Definition of Done (DOD) for each Product Backlog Item (PBI).
- Write your Sprint Planning notes for all Sprints.
- Write Sprint Retro notes including burndown charts
- Setup and start using ClickUp
- Setup Github for use for the rest of the project.
- Set up architecture framework in Github, and some abstract APIs for Microservices, if planned.
- Write unit tests for your backend APIs.
- Write Acceptance Test based on User Stories.
- Release a version on Github with Release Notes
