Project Sprint Planning Notes
Team: 2

Sprint: 1
Date: 12 August 2020

Attended:
Scrum Master: Anthony Ojaimi (s3782507)
Product Owner: Danial Isman (s3786400)
Development team:
Darren Huang (s3755729)
Chinguun Undrakh (s3774562)

1. Goal
   Implementation of the following functionalities:

   - The system should display a home page with functionality such as login/sign-up, about and contact-us.
   - Create 3 user types; admin user (business owner); workers, who can log in and see their dashboard; customers, who want to book an appointment for service.
   - Authenticate and authorise users based on user type/role, i.e., business owner or customer.
   - User registration for customers: name, address, phone, username and password.
   - The customer data must be saved to the database.

2. Duration of the sprint
   The duration of the sprint is 2 weeks.

3. What is the team's vision for this sprint?

   In this sprint, the team aims to complete the implementation of functionalities as stated in the goal. The items of the product backlog committed for this sprint is:
   - User Registration
   - Log in
   - Home page
   - Dashboard
   - Contact Us Page
   - About Us Page

The aforementioned backlog items were determined by the group to be done first as the User Registration and Log-in functionality is deemed as an important component for the product.

Which items of the product backlog will be committed to sprint backlog and why?

At the end of the sprint, a shippable product would look like when a new customer can create an account and use the account to log-in their account. Moreover, when a user needs to send a query, they can check the company contact details on the contact us page.

What will the potentially shippable product look like in the end? What features will it have in its working form?

4. Estimation in story points
